

# Did You Know?

Honeybees spend their life pollinating, gathering nectar, and condensing that nectar into honey.

Over its short lifetime, a single honeybee's contribution of honey to its hive is 1/12 of a teaspoon, yet an entire hive can produce 60-100 pounds of honey in a year.

Thinking small in a world so large—with so many needs—might feel overwhelming. But the lesson of the honeybee teaches each of us that even 1/12 of a teaspoon can produce something sweet.

## **You are a disciple of Jesus Christ.**

Sharing your testimony with a friend, serving in the community, inviting a friend to church, or saying hello to a neighbor might seem like a small thing, but the lesson of the bees is profound.

When many people each do something small, together they accomplish something incredible.

As you work side by side with the youth and leaders in your ward you will strengthen your discipleship to the Savior.
